

# Your GPA

---

*Suggested timeframe of completion: January 1- March 1*

This is usually the time when students start to realize just how important their GPA is, as it's a major factor in which colleges, educational and certificate programs, scholarships, and internships you will be eligible for after graduation and can affect your competitiveness for apprenticeships or jobs after graduation.

## Tips to raise your GPA

- 1. Put in a bit more study time
- 2. Stay on top of your grades through the semester/trimester
- 3. Check with your teacher to see if there are things you might be able to do to raise your grades.
- 4. Retake a class you didn't do as well as you would have liked to.
- 5. If taking advanced or college prep course, make sure your grades are properly weighted.
- 6. If you took any high school classes prior to 9th grade make sure they are on your transcript.

## Use the GPA Calculator

Use the Next Steps' GPA Calculator to find out where you stand.
